

Our preferred option

Our preferred option is Option 4 – Raise the flood walls, embankments and roads to provide a 1 in 5 year (20% probability of flooding in any year) level of protection against flooding from the river and a 1 in 200 year (0.5% probability of flooding in any year) level of protection against flooding from the sea. This option provides protection to 63 properties (higher than any other option) and has the highest benefit/cost ratio and partnership funding score.

A Raise embankment around drain outfall

B Raise brick wall

C Replace brick wall

D Raise brick wall

F Raise embankment and road surface. A temporary barrier could be used instead of raising the road.

E Stop seepage through concrete wall
